

ROUGHSTOCK STRIPPING CHUTE

PURPOSE-DRIVEN. BUILT TO LAST. NO EXCUSES.

PURPOSE-BUILT COMPONENTS

When building a stripping chute other brands often take a makeshift approach by piecing together existing gates and panels, for something that “works”. Powder River takes a different route. We design every component specifically for its use point, ensuring top-tier performance. No workarounds here.

MORE EFFICIENT STRIPPING

This alley provides greater control and easier rig removal compared to competitor models. Its narrow 30-inch design enhances stripping efficiency by restricting roughstock movement, while the built-in catwalk allows easy access to roughstock, further improving handler safety and workflow efficiency during high-volume operations.

PREVENTS ANIMAL INJURY

The fully sheeted center panel protects valuable livestock by acting as a solid barrier. It keeps animals contained, prevents injury, and eliminates the risk of them getting hooked or entangled—ensuring safer handling, cleaner lines, and a more professional setup overall.

FEATURES & SPECIFICATIONS

- Modern looking square tube
- Half Sheeted
- Pin and clip connection for easy assembly and tear down
- Double roll gates
